EVERGREEN DESIGN GROUP, INC.

FOUNDED IN 2005

A PROFESSIONAL LANDSCAPE  
ARCHITECTURAL FIRM  
SERVING COMMERCIAL,  
INDUSTRIAL, RETAIL, HOSPITALITY,  
MIXED USE, RELIGIOUS, PUBLIC,  
EDUCATIONAL AND  
RESIDENTIAL CLIENTS  
THROUGHOUT THE UNITED STATES.

## LAND PLANNING SERVICES

Our Land Planners with Evergreen Design Group are laser focused to that end! We have extensive research experience to stay code compliant. We are experts at preparing Conceptual Site Plans for a multitude of sizes and types of projects throughout the United States.

We prepare realistic Conceptual Site Plans that are cost-effective, balanced, and technically sound. Our goal is always the same...to create exquisitely planned developments where the architecture and landscape environments exist in harmony and balance offering everyone a stunning space in which to live, work, visit, and play.

### TYPES OF PROJECTS

Our projects range from master-planned mixed-use communities, commercial developments, residential subdivisions, business parks, sports & recreation parks, and resort destinations.

### LOCATIONS SERVED

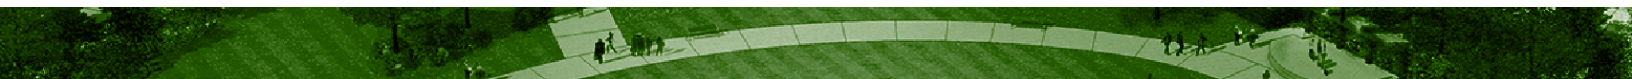

We offer our Land Planning services nationwide.

### SCOPE OF SERVICES

- Research local codes that may affect site layout.
- Conduct a remote preliminary meeting with the Client to discuss the project.
- Prepare an Illustrated Rendering of the Conceptual Site Plan (By CAD or by hand) for Client review.
- Review and discuss the Conceptual Site Plan with the Client (remotely via a screen share).
- Make updates to the Conceptual Site Plan per the Client's comments.
- Prepare an Illustrated Rendering of the Colored Conceptual Site Plan (with a detail legend, land use and program summary data, and any necessary calculations).

# LANDSCAPE DESIGN SERVICES

A landscape should complement its surroundings, both its regional climate as well as those who will use the environmental space. It should reflect the interests, needs and sensibilities of the tenants, customers or residents. And because a landscape is comprised of both living plants and permanent elements, it must be designed with future growth in mind.

At Evergreen Design Group, we combine the science of growing with the art of design. From start to finish, we keep in mind the personality of the client, the style of the architecture, the regional climates, and the expected use of the outdoor space. We create real-world landscapes of living, lasting beauty that reflect our clients individuality as well as those who will utilize the space. We believe landscapes should be beautiful and functional, respect the environment and stay within budget. Evergreen Design Group is a leader in designing sustainable landscape solutions.

- Tree Disposition Plans
- Planting Plans
- Landscape Drainage
- Landscape Lighting
- Hardscape Plans
  - Monument Signs
  - Pavers & Colored Concrete
  - Raised Planters
  - Water Features

# IRRIGATION DESIGN SERVICES

The expert team of Irrigation Consultants at Evergreen Design Group provide design and consulting services for a multitude of project sizes and types in all regions and climates from coast to coast. Our consultants thoroughly analyze each project's intended use as well as the terrain, climate, and soil to manage water usage and conservation. We work to achieve a balance between water availability, plant selection, climate and rainfall in your landscape project and design a properly functioning irrigation system that achieves your needs and objectives.

Today, many business owners, architects, developers and governmental jurisdictions are becoming conscious of water needs and usage and are beginning to realize the tremendous need for conservation of our natural resource. The fact that poorly designed and installed irrigation systems are a factor in wasted potable water is the driving force behind Evergreen Design Group's proactive stance in irrigation designs that create irrigation systems with water conservation in mind.

Our Landscape Irrigation Consultants approach every project with water efficiency and water conservation as the foundation of our designs.

Our irrigation design services include:

- Irrigation system design
- Two-wire and central control systems
- Pump stations and controls
- Projects applying for LEED accreditation
- Alternative water sources (such as ponds)
- Water capture/re-use systems, including runoff, HVAC condensate, and greywater
- Green roofs

# GRAPHICS SERVICES

Transferring a project design into a visual representation enables others to see and understand the full impact of the design you are presenting. In utilizing today's technology, combined with great talent, your projects visually come to life and showcase the depth of your designs.

Our Landscape Architects create stunning visual presentations to convey the look, feel, and character of a landscape environment in easily understandable graphics that have instant emotional impact for public meetings, jurisdictional approvals, marketing collateral, sales presentations, job site signage, or benefit fundraising events.

The following is a list of the types of graphics that we provide.

- **Charrette / Concept Sketches** – A hand-drawn study, sketched to illustrate design intent and character.
- **Conceptual Site Plan / Masterplan** – A developed plan view in gray-scale or color showing design elements and relationships.
- **3D Mass Modeling** – A digital study of design element massing, scale, and sequence.

- **3D Rendered View** – A detailed digital design study, illustrating the user experience in a space.
- **Signage Concept Elevations** – A color illustration showing size, scale, and materials of monument or way-finding signage.
- **Landscape Planting Elevations** – A color illustration of proposed plant species in relation to architectural structures.
- **Site Sections** – A cross-section through the project site in gray-scale or color, depicting design elements in relationship to topography.
- **Color Plan Rendering** – A detailed illustrated of the final design, either digitally or by hand.
- **Augmented Reality Views** – A detailed color view of the project design elements positioned in context with the existing surrounding area.
